Biological Materials in Animals

Description

All research projects involving biohazards (pathogens, recombinant/synthetic nucleic acids, and biotoxins with an LD50 ?100 µg/kg body weight or that are controlled for export are registered through the EH&S Biosafety Office. Handling of animals that have been exposed to Biological Materials is highly project specific. This will be addressed during your Biohazard Project Registration and/or IACUC Protocol review.

- **Biohazard Project Registrations:** IACUC protocols will not receive final approval until the biohazard project approval is finalized by the Biosafety Office and/or IBC.
- Acute Toxins in Animals: Review the <u>Acute Toxins in Animals Fact Sheet</u>.
- Viral Vectors in Animals: Review the Viral Vector Fact Sheet for information on groups of commonly used viral vectors.
- Bloodborne Pathogens: Review the <u>Bloodborne Pathogen webpage</u> for information on enrollment in the BBP program. More information can be found in the <u>Exposure Control Plan</u>.
- Human Products in Animals: The full policy can be found <u>here</u>. Review the <u>Human Products in</u> <u>Animals Fact Sheet</u>
